We have an immediate need to hire a Senior Member of Technical Staff, who will focus on developing key ███████████████████ utilities for ███ operations. This includes areas of ████████████████████████ (such as ████████, and ██████████) as well as "█████████████████████████████", █████████████ and ███████ - all of which are very important to the overall success of ██████ customers and have aggressive timelines.

We are proposing to hire ████████ who has over 10 years of software development experience in Java and J2EE technologies. ██████ interviewed well with our team - all the interviewers noted that ██████ has very positive attitude and did well answering all types of questions. ██████ has demonstrated good understanding of advanced Java, trouble shooting and debugging techniques – skills that are very important and applicable to many areas of the ████████ products.

██████ interviewed with several members of the ███ Organization including ██████████, ████████████████████████████████████ and ███████████. All agree that █████ will be a solid contributor to the organization due to strong Java skills, dynamic attitude, and strong subject matter expertise. ██████ has excellent communications skills and can articulate complex concepts clearly. This is a key asset, as a big part of our responsibilities is to reach out to numerous ████████████ and ██████████ teams, explain the use case, and jointly develop a strategy.

██████'s last job was with ████████████ as a Software Engineer/Team Leader where she was in charge of 5 member team developing ██████████████████████████ initiative that aimed at establishing a common base of client software, upon which █████, and ultimately third parties could efficiently and consistently deliver UC features such as Contact Management that used Active Directory (LDAP) & XMPP and Collaboration applications for a broad range of endpoints. Among other things ██████ has received more than ████████ (██████████████████ ████████) and other awards for outstanding performance and contribution at ███.

Summary of Experience:

- 8 yrs of server side development using core Java (J2EE) for commercial software products. Strong Database (SQL Server, Oracle, Informix, MySQL) and Design (oop, RDBD, Web design) experience.
- Cross platform development experience for enterprise, mobile, SaaS, and cloud solutions
- Responsible for entire platform from designing new features, security, install/upgrades and administration maintenance.
- Designed and developed features for highly scalable distributed systems. Platform would handle 10K-50K transactions on multiple servers.

To provide a reasonable offer, we are proposing a base salary of $██████ ███████ is very excited to join Oracle, for the team/company culture as well as the opportunity to work on the new ████████████ initiative.
