I would like to make sure that choice of doctors and the choices that the doctors make on behalf of patients be included in an administrative body of rules to hold objective and subjective weight over any administrative medical services rendered to patients through medical insurance. Also that a responsibility clause be enforced that requires doctors to correct any medical problems which occur under the care of him or her directly in a timely manner and if needed before the statute of medical malpractice law provides. And also that current standards of the Hippocratic oath be upheld not in an arbitrary old boys network of doctors and lawyers but, under the auspices of a transparent review board both state and federal.
