To Whom it may concern:

Health care does not include contraception since pregnancy is not a disease. This ordinance by a mere department of government is stepping out of the bounds of reason, and I believe beyond what the true authority of government intended.

Health care does not include forcing people to act against their conscience. This ordinance tries to slither around the reality of taking away the right to practice one's religion and follow one's conscience freely. Your proposed regulations shoot us in the foot, and eventually will do the same to you, politically and eternally.

If this note sounds as though I am angry with you people, you will have understood its import. Stop using our money for immoral purposes such as murder itself...IUD's, "morning-after" birth control which is an abortifacient, and preventing what the Creator intended by His gift of sexuality.

John Pilaczynski, Ph.D.
