When I was young the "PILL" was new. This innovation released all women from sexual enslavement. Why would young women now want to be enslaved. To have a baby every nine months, whether I wanted one or not is slavery to the sexual ideas of others. Before the "PILL" women of my generation were forced to have coat hanger abortions, or give up the unwanted baby. or marry too early.

Is this really what American women want or deserve! Health insurance must include reproductive insurance, for both women and their partners so we don't regress to this unthinkable backward sexual control.
