Subject: private retirement plans

Leave my private retirement plans alone! The American people do not need the government controlling a person's retirement accounts. It is my money. I worked for it. Leave it alone!

You want to reduce the Federal Deficit, cut government spending, eliminate Congressional pensions and make all government employees (this means all elected and appointed government officials) pay into social security. If the government has a deficit for the current year, then no one in Congress gets any type of salary increase the next year. If a business is losing money, they freeze salaries, eliminate bonuses, reduce expenses and cut staff. Why should the US government should any different?
