Appalachians Training for Employment in Technology (ATET)

The goal of the WORC grants is to create economic prosperity and gainful employment opportunities for eligible residents in impacted ARC and DRA regions, enabling them to remain and thrive in these communities.

Project ATET will provide the participants the opportunity to train for jobs with high-quality employment outcomes. The project will serve dislocated workers, incumbent workers and new workforce entrants. Participants served will enroll in BV's advanced manufacturing technology (AMT) degree program or one of its three information technology (IT) degree programs: 1) computer science technology (CS) with a software development concentration, 2) CS: web development concentration, or 3) cybersecurity and network technology. ATET will also provide participants with a combination of employment-related activities and intensive support services and individualized case management to address any barriers that may prevent them from completing their degree and obtaining high-quality employment with one of BV's partnering employers.
