Dictionary for OTAA Petition Data			<b>Last Update</b> 7/6/2021		
FIELD		all worker groups subject to a valid petition from 1975 to Present under the TAA Prog Explanation	Other Information	Years Available	
TAWSUFF (with c9 for web posting)	String	Provides a concatenation of TAW and Suffix fields with the ASCI character 9. This forces the concatenation to always be interpreted by excel as a string field for matching. The TAW and Suffix combination provides a unique key for worker groups (records) in the dataset.		1975-Present	
TAW	Integer	TAW number is the number we assign to a properly received, valid petition. While a petition may cover multiple worker groups, the petition number is consistent across all worker groups resulting from that petition.		1975-Present	
Suffix	String	The suffix identifies the worker group for a particular petition. Suffix is blank for the first worker group for a TAW and then a suffix A-ZZ is assigned for each subsequent worker group. A TAW and suffix uniquely identify a worker group (record) in the dataset.		1975-Present	
Worker Group Name	String	This is the primary name of the identified worker group. Typically it is the firm or ompany, but maybe a more specific articulation depending on the decision.		1975-Present	
Second Name	String	The second name provides details on indivudal unit names, department names, leased worker groups, parent or subsidiary company names, or other clarifications.	This field may be incomplete. Because of length limitations in this field, second names are truncated to include only the most relevant names. If space was still insufficient, inclusion of "etc." helps to indicate that further clarifications are in the decision that could not be documented in the dataset.	1975-Present	
Street Address	String	This is the street address that is the primary work location of the worker group. In some cases, an address may not be available such as due to company closure or because the worker group covers a broader geographic region.	Since 2013, the Department has increased efforts to ensure addresses are validated. Starting in 2020, address verification is done automatically. Older data will be subject to greater error.	1975-Present	
City	String	The name of the city in which the primary work location of the worker group resides. Some may specify a broader geographic region.	Since 2013, the Department has increased efforts to ensure addresses are validated. Starting in 2020, address verification is done automatically. Older data will be subject to greater error.	1975-Present	
State	String	The name of the abbreviation for the state or territory in which the primary work location of the worker group resides. Some may specify a broader geographic region.	Since 2013, the Department has increased efforts to ensure addresses are validated. Starting in 2020, address verification is done automatically. Older data will be subject to greater error.	1975-Present	
Zip	String	The zip code in which the primary work location of the worker group resides. Some may specify a broader geographic region. Note that this is coded as a string to ensure leading zeros are not removed.	Since 2013, the Department has increased efforts to ensure addresses are validated. Starting in 2020, address verification is done automatically. Older data will be subject to greater error.	1975-Present	
Zip Plus 4	String	The zip+4 in which the primary work location of the worker group resides. Some may specify a broader geographic region. Note that this is coded as a string to ensure leading zeros are not removed.	Zip+4 was not used until 2011 and was only provided when available. New address verification changes starting in 2020 are expected to substantially increase the availability of zip+4 information.	2011-Present	
County_Long (Geo)	String	Provides the county name of the primary work location of the worker group as provided by geolocation API data.	All "Geo" data fields are looked up through the use of a standard address verification API. As such, it is subject to error and may not be available where the location could not be found. Lookup has been done since 2013 with some historic data also being available.	2013-Present	
Latitude (Geo)	Decimal	Provides the latitude of the primary work location of the worker group as provided by geolocation API data.	All "Geo" data fields are looked up through the use of a standard address verification API. As such, it is subject to error and may not be available where the location could not be found. Lookup has been done since 2013 with some historic data also being available.	2013-Present	

Longitude (Geo)	Decimal		All "Geo" data fields are looked up through the use of a	2013-Present
			standard address verification API. As such, it is subject to error

Worker Group Type	String	Production, Service, or Mixed. This should align with whether a product	data also being available.	1975-Present
Worker Group Type	String	was listed (production), a service was listed (Service), or both were listed		1373-Fresent
		(Mixed).		
Product	String	Free-text field designed to capture the product that the specific worker		1975-Present
	J8	group is engaged with. This may mean that while the company works on		
		broader products or services, the specific group may list a product or		
		service more narrowly tailored to their specific activities. For example, a		
		computer company may have 'credit approval services' listed because		
		the worker group did credit approval services for the computer company.		
Service	String	Free-text field designed to capture the service that the specific worker		1975-Present
		group is engaged with. This may mean that while the company works on		
		broader products or services, the specific group may list a product or		
		service more narrowly tailored to their specific activities. For example, a		
		computer company may have 'credit approval services' listed because		
		the worker group did credit approval services for the computer company.		
Petitioner	String	This provides the category of the petitioner who submitted the petition.	The raw data has changed in format substantially since TAA's	1992-Present
	· · · · · · · · · · · · · · · · · · ·		inception including using a free-text field and code values with	
			no corresponding lookup table. The coding values prior to 1992	
		• • •	provided an unknown categorization. Data since 1992 has been	
		·	recoded in to predictable categories to aid analysis.	
SIC	String	The SIC code that designates the industry that the worker group's firm	Used from 1974 to 2011. The Department began utilizing NAICS	1975-2011
			codes in 2007 and uses them presently. No systematic	
			validation was done on SIC codes.	
NAICS Code	String	The NAICS code that designates the industry that the worker group's firm	The Department began using NAICS codes in 2007 and phased	2007-Present
		engages in.	out the use of SIC codes. Initial validation only confirmed the	
			first two digits that indicate the broad industry sector.	
			Beginning in 2017, a full 6-digit validation began to ensure	
			codes were accurate.	
NAICS Code Year	Integer	The code year of the NAICS code provided. Provides the last code year in	The Department began using NAICS codes in 2007 and phased	2007-Present
			out the use of SIC codes. Initial validation only confirmed the	
			first two digits that indicate the broad industry sector.	
			Beginning in 2017, a full 6-digit validation began to ensure	
			codes were accurate.	
NAICS Title 2	String		The Department began using NAICS codes in 2007 and phased	2007-Present
			out the use of SIC codes. Initial validation only confirmed the	
			first two digits that indicate the broad industry sector.	
			Beginning in 2017, a full 6-digit validation began to ensure

NAICS Title 6	String	·	The Department began using NAICS codes in 2007 and phased	2007-Present
			out the use of SIC codes. Initial validation only confirmed the	
			first two digits that indicate the broad industry sector.	
			Beginning in 2017, a full 6-digit validation began to ensure	
			codes were accurate.	<u> </u>

Petition Date	Date	The date on which the submitted petition was signed.	The petition date was collected beginning in 1992. As with most data fields, validation has improved over time with redudant petition date checks being implemented in 2012.	1992-Present
Inst Date	Date	The institution date indicates when the office began their investigation.  Delays between the petition date and institution date may result from transmission method (such as mail), because of delays transmitting the message, or that some additional information was needed for the petition to be valid.		1975-Present
Det Date	Date	The determination date indicates when the Department rendered a decision on the worker group. When multiple determinations exist, this date will reflect the earliest date of certification (if applicable), the most recent statutory reconsideration (2015 only), or the initial determination date if other dates do not apply.		1975-Present
Inv Det Code	String	Provides the statutory basis for the determination. Please see Codes_2002_Reversion and Codes_2009_2011_2015 for a full list of codes and their meanings. The 2002 and Reversion codes (no dashes) are applicable to TAW numbers below 70,000 as well as between 84,000 and 89,999 where the decision was rendered prior to 6/29/2015. 2009/2011/2015 codes (with dashes) apply to TAW numbers between 70,000 and 83,999 as well as all decisions subsequent to 6/29/2015.		2002-Present
Det Code	String	Provides the broad determination outcome of the worker group indicating whether they were certified, denied, or the investigation was terminated. Partial certifications indicate that portions of the worker group were certified while other parts were denied. Please see the Det_Code tab for the meanings of various codes.	Prior to the 2002 law, the category of certification was not articulated. Beginning in 2002, the broad category was provided as described on the Det_Code tab. Code tables for Inv Det Code provide a crosswalk between the two codes. Prior to 2012, there may be misalignment betwen the two codes.	1975-Present
Impact Date	Date	The impact date is the earliest date a separation can occur for a participant to be eligible. By statute, this is <i>typically</i> one year before the petition is filed. However, some exceptions apply for C-ITC determinations, to prevent overlapping certifications, substantial delays in the receipt of a petition, and others. This is not an indicator of when separations actually occurred.		1975-Present
Expiration Date	Date	The expiration date is the date on which a certification's eligibility period ends. This indicates the last date a separation can occur for a participant to be eligible or the last date that a threatened, but not separated worker may be served. It is <i>typically</i> two years after a certification is rendered, but exceptions apply for C-ITC determinations, to prevent overlapping certifications, and others.		1975-Present
Last Investigator	String	This field displays the investigator on the initial investigation for the petition to determine group eligibility. If multiple investigators worked on an investigation, the investigator who completed the initial investigation is listed.	Tracking of investigators began in 1979, however only one investigator could be tracked. Beginning in 2005, systems were able to keep track of two investigators (the first and initial). In 2020, further improvements were made to be able to track all investigators.	1980-Present
CAS Last Assignment on Initial Investigation	Date	This file provides the date on which the last last investigator was assigned or reassigned the investigation.	<u> </u>	1980-Present
Certifying Officer Last Name	String	This field displays the certifying officer who signed the initial investigation determination.	Not tracked prior to 2001.	2001-Present

CAS First Decision Date	Date	Displays the date the initial determination was rendered on the case.	Note that this will be the same for all suffixes even if a suffix was added by a post-initial determination. For investigations	1975-Present
			prior to 2016, this determination date could have been updated	
			by a subsequent post-initial revision on reconsideration or	
			remand. Beginning in 2016, post-initial determinations were	
			tracked separately which prevents overwriting of the decision.	
Most Recent Update	Date	Displays the date of the most recent decision affecting this worker group record.	After the initial investigation, post-initial decisions may	2016-Present

WG Correction Investigation Count	Integer	This is the number of correction ivestigations that that the particular	No data prior to 2012 and not comprehensively tracked until	2012-Present
		TAW and Suffix combination. Corrections make minor changes with a	2016.	
		decision text without fundamentally changing the outcome.		
WG Application for Reconsideration Investigation Count	Integer	This is the number of application for reconsiderations ivestigations that that the particular TAW and Suffix combination. Prior to the implementation of new regulations in September 2020, requests for reconsideration required an initial assessment to determine if the application justified a reconsideration investigation. This step is no longer required under the new regulations.	No data prior to 2012 and not comprehensively tracked until 2016.	2012-Present
WG Reconsideration Investigation Count	Integer	This is the number of reconsideration investigations that that the particular TAW and Suffix combination. Reconsideration investigations are only applicable to groups initially denied or terminated and may result in an affirmation of the denial or being revised to a certification.	No data prior to 2012 and not comprehensively tracked until 2016.	2012-Present
WG Remand Investigation Count	Integer	This is the number of remand investigations that that the particular TAW and Suffix combination. Remand investigations are similar to reconsideration investigations, but ordered by the court.	No data prior to 2012 and not comprehensively tracked until 2016.	2012-Present
WG Statutory Reconsideration Investigation Count	Integer	This is the number of statutory investigations that that the particular TAW and Suffix combination. Statutory investigaitons are the result of legislative changes that mandate the reopening of denied petitions under new statutory criteria.	Tracked 2014 to present.	2014-Present

Code	Reason for Decision
C1	Imports
C2	Shift in Production
CD	Certified Downstream
CU	Certified Upstream
C	Certification (unspecified)
P	Partial Certification
D	Denial
T	Termination

Codes for 2002 and Reversion Programs

Investigator	Determination	Explanation		
Determination Code	Code	Explanation		
CERTIFICATIONS				
PRIMARY				
C1	C1	Increased Company Imports		
C2	C1	Increased Customer Imports		
C3	C1	Increased Aggregate Imports		
C4	C2	Shift in Production to Country with a Free Trade Agreement/Beneficiary		
C5	C2	Actual/Likely Increase in Imports Following a Shift Abroad		
SECONDARY
