

We have an immediate need to hire a Consulting Member of Technical Staff in HQ, who will focus on developing key [REDACTED] utilities for SaaS operations. This includes a brand new [REDACTED] solution, significant enhancements to the Production to Test/Production to Stage solution, and any [REDACTED] configurations needed for [REDACTED] to stand up a customer environment – all are very important to the overall success of SaaS customers and have aggressive timelines. We have been looking for someone to fill this position since April 2013 and due to the unique skillset and experience this position requires it has taken 4 months find a good candidate for this position. We are proposing to hire [REDACTED] who has 18 years of software development experience in Java, J2EE, and Oracle technologies. [REDACTED] interviewed with six members in our HQ team and all interviewers gave a strong recommendation for hire. He is very knowledgeable in both Java, database and Cloud deployment technologies. He was able to solve complex design problems. He was able to provide crisp answers on various challenges such as migrating across data centers as well as in tuning web applications for cloud deployment. [REDACTED] is currently working as Staff Software Engineer at Intuit earning 145k + 25K Bonus totaling 170K plus he also has RSUs with a projected value of 31K. To be competitive, we are offering [REDACTED]. He is a strong candidate who demonstrated the ability to be a quick learner and was able to understand new concepts well; therefore we are confident he will be able to integrate quickly and make a significant impact on our [REDACTED] utilities for SaaS operations.
