DECISION AND ORDER

Before:
DAVID S. GERSON, Judge
MICHAEL E. GROOM, Alternate Judge

JURISDICTION

On October 3, 2005 appellant filed a timely appeal of a September 26, 2005 decision of an Office of Workers’ Compensation Programs’ hearing representative, affirming a November 22, 2004 schedule award decision. Pursuant to 20 C.F.R. §§ 501.2(c) and 501.3, the Board has jurisdiction over the schedule award issues of this case.

ISSUE

The issue is whether appellant has more than a 10 percent permanent impairment to his left leg, for which he received a schedule award on November 22, 2004.

FACTUAL HISTORY

On July 22, 2003 appellant, then a 54-year-old electronics technician, filed a traumatic injury claim (Form CA-1) alleging that he injured his left knee while in the performance of duty on July 14, 2003. Appellant indicated that he was kneeling down to stack a drive belt when he felt pain in his left knee. The Office accepted the claim for a torn meniscus of the left knee. Appellant underwent a partial medial and lateral meniscectomy of the left knee on September 25, 2003. He returned to work on November 3, 2003.
In a report dated June 9, 2004, the attending orthopedic surgeon, Dr. Brian Stennett, noted that appellant had undergone a partial medial and lateral meniscectomy and that appellant also had degenerative arthritis of the left knee. He stated that appellant had reached maximum medical improvement and had a 22 percent permanent impairment to his left leg: “This is based on the fact that he underwent a surgical arthroscopy of his knee with partial medial and lateral meniscectomies. This is calculated through the use of Table 64.”

An Office medical adviser reviewed the medical evidence and in a report dated October 27, 2004, opined that appellant had a 10 percent permanent impairment to the left leg. He identified Table 17-33 of the American Medical Association, *Guides to the Evaluation of Permanent Impairment* and reported that a partial medial and lateral meniscectomy was a 10 percent leg impairment.

By decision dated November 22, 2004, the Office issued a schedule award for a 10 percent impairment to the left leg. The period of the award was 28.80 weeks from June 9, 2004.

Appellant requested a review of the written record and argued that a conflict existed between Dr. Sennett and the Office medical adviser. In a decision dated September 26, 2005, the hearing representative affirmed the November 22, 2004 decision.

**LEGAL PRECEDENT**

Under section 8107 of the Federal Employees’ Compensation Act and section 10.404 of the implementing federal regulation, schedule awards are payable for permanent impairment of specified body members, functions or organs. The Act, however, does not specify the manner in which the percentage of impairment shall be determined. For consistent results and to ensure equal justice under the law for all claimants, good administrative practice necessitates the use of a single set of tables so that there may be uniform standards applicable to all claimants. The A.M.A., *Guides* has been adopted by the Office, and the Board has concurred in such adoption, as an appropriate standard for evaluating schedule losses. As of February 1, 2001, the fifth edition of the A.M.A., *Guides* was to be used to calculate schedule awards.

**ANALYSIS**

In the present case, the November 22, 2004 schedule award was based on the opinion of the Office medical adviser, who applied Table 17-33 of the A.M.A., *Guides*. Under Table 17-33, a partial medial and lateral meniscectomy represents a 10 percent leg impairment. Appellant

argues that there is a conflict in the medical evidence, as Dr. Sennett opined that appellant had a 22 percent leg impairment. The opinion of Dr. Sennett is of diminished probative value, however, as he did provide a reasoned opinion based on the fifth edition of the A.M.A., Guides. He referred generally to Table 64, which is a table from the fourth edition of the A.M.A., Guides. The Board notes that, under Table 64, as well as Table 17-33 of the fifth edition, a 22 percent impairment is for a total medial and lateral meniscectomy. The June 9, 2004 report from Dr. Sennett and the September 25, 2003 operative report note that the surgical procedure was for a partial medial and lateral meniscectomy. The probative medical evidence of record rests with the Office medical adviser in this case. There is no probative medical evidence that appellant has more than a 10 percent left leg impairment.

The Board notes that the number of weeks of compensation for a schedule award is determined by the compensation schedule at 5 U.S.C. § 8107(c). For complete loss of use of the leg, the maximum number of weeks of compensation is 288 weeks. Since appellant’s permanent impairment was 10 percent, he is entitled to 10 percent of 288 weeks, or 28.8 weeks of compensation. It is well established that the period covered by a schedule award commences on the date that the employee reaches maximum medical improvement from residuals of the employment injury. In this case, Dr. Sennett indicated that appellant reached maximum medical improvement in his June 9, 2004 report, and therefore the award ran for 28.80 weeks commencing on June 9, 2004.

**CONCLUSION**

The Board finds that the medical evidence does not establish more than a 10 percent permanent impairment to the left leg.

**ORDER**

**IT IS HEREBY ORDERED THAT** the decisions of the Office of Workers’ Compensation Programs dated September 26, 2005 and November 22, 2004 are affirmed.

Issued: February 2, 2006
