Case Submitted on the Record

DECISION AND ORDER

Before:
ALEC J. KOROMILAS, Chief Judge
JANICE B. ASKIN, Judge
VALERIE D. EVANS-HARRELL, Alternate Judge

JURISDICTION

On November 1, 2023 appellant, through counsel, filed a timely appeal from an October 23, 2023 merit decision of the Office of Workers' Compensation Programs (OWCP). Pursuant to the Federal Employees' Compensation Act² (FECA) and 20 C.F.R. §§ 501.2(c) and 501.3, the Board has jurisdiction over the merits of this case.

¹ In all cases in which a representative has been authorized in a matter before the Board, no claim for a fee for legal or other service performed on appeal before the Board is valid unless approved by the Board. 20 C.F.R. § 501.9(e). No contract for a stipulated fee or on a contingent fee basis will be approved by the Board. *Id.* An attorney or representative's collection of a fee without the Board's approval may constitute a misdemeanor, subject to fine or imprisonment for up to one year or both. *Id.*; *see also* 18 U.S.C. § 292. Demands for payment of fees to a representative, prior to approval by the Board, may be reported to appropriate authorities for investigation.

² 5 U.S.C. § 8101 *et seq.*

ISSUE

The issue is whether appellant has met her burden of proof to establish a left upper extremity condition causally related to the accepted factors of her federal employment.

FACTUAL HISTORY

This case has previously been before the Board.³ The facts and circumstances as set forth in the Board's prior decision are incorporated herein by reference. The relevant facts are as follows.

On January 2, 2020 appellant, then a 46-year-old city carrier, filed an occupational disease claim (Form CA-2) alleging that she sustained an injury to her arm due to factors of her federal employment, including repetitive trauma. She noted that she first became aware of her condition on October 10, 2019, and first realized it was caused or aggravated by factors of her federal employment on October 17, 2019. On the reverse side of the claim form, the employing establishment noted that appellant did not stop work, but that her work duties had changed to preclude use of her left arm.

In support of her claim, appellant submitted a statement dated December 18, 2019, indicating that on October 10, 2019 her left arm started to hurt and was swollen, and she noticed a knot the size of a grape that was very tender near the crease of her elbow. By October 17, 2019, the knot was excruciating to touch, and she observed a vein that had become raised and dark red, blue, and purple. Appellant immediately sought medical care and was referred to the emergency room where she was treated by Dr. Bassel Atassi, a Board-certified hematologist and oncologist, who diagnosed an acute deep vein thrombosis (DVT). She further indicated that, after questioning her at length about her daily life, Dr. Atassi advised that the clot was caused by her holding her left arm in the same position for 7 to 10 hours per day. At that point, appellant realized that the condition was caused by factors of her federal employment, which she indicated included, among other things, carrying 10 pounds of letters, magazines, large envelopes, and newspapers on her left arm while in a bent position. She explained that the magazines' spines would usually press against the area where she developed the knot, and the worst of her symptoms occurred while she was carrying those items.

In an October 19, 2019 hospital discharge summary, Dr. Ahmad Alwakkaf, a Board-certified internist, noted that appellant had related a history of left arm pain, swelling, and skin changes for one to two weeks. Appellant underwent a venous doppler ultrasound which revealed DVT in one of the left brachial veins. Dr. Alwakkaf examined her and diagnosed an acute DVT of the left upper extremity. He recommended that appellant remain on anti-coagulation medication for three months and follow up with Dr. Atassi on November 1, 2019.

In an undated work slip, Dr. Jerome Anthony, an internist, noted a diagnosis of DVT and recommended appellant remain out of work on November 1, 2019 and return to work on November 2, 2019 with restrictions of no use of the left arm.

³ Docket No. 21-0211 (issued March 21, 2023).

In a work slip dated December 12, 2019, Dr. Sheela Manaparambil, a Board-certified internist, recommended appellant remain out of work from that date through January 1, 2020, followed by light duty for three months.

In a development letter dated February 3, 2020, OWCP informed appellant that the evidence submitted was insufficient to establish her claim. It asked her to complete a questionnaire to provide further details regarding the circumstances of her claimed injury and requested a narrative medical report from her treating physician, which contained a detailed description of findings and diagnoses, explaining how her work activities caused, contributed to, or aggravated her medical condition. OWCP afforded appellant 30 days to respond.

OWCP thereafter received a March 9, 2020 narrative report from Dr. Manaparambil, who noted that appellant had been treated in her office on October 17 and November 13, 2019 and February 27, 2020. Dr. Manaparambil diagnosed DVT of the left brachial vein and thrombophlebitis of the left basilica vein. She outlined appellant's treatment in the hospital, noting that, while there, appellant was also diagnosed with a small pulmonary embolism. Dr. Manaparambil opined that the DVT was likely precipitated from prolonged immobilization of the arm while delivering mail at work.

By decision dated March 25, 2020, OWCP denied appellant's occupational disease claim, finding that the medical evidence of record was insufficient to establish that her diagnosed medical conditions were causally related to the accepted factors of her federal employment.

OWCP continued to receive medical evidence, including hospital records dated October 17, 2019. Eileen Moriarity, an advanced practice registered nurse, noted that appellant related left arm pain for approximately two weeks with swelling at the medial elbow. Physical examination revealed mild swelling and ecchymosis at the medial elbow, tenderness to palpation of the medial proximal forearm, medial elbow, and distal upper arm, and an inability to fully extend the elbow. The October 17, 2019 hospital records also included a report from Dr. Atassi, who noted a history of swelling that started one and one-half weeks ago while appellant was working. Dr. Atassi further noted that she was a mail carrier and used her left arm to carry up to 30 pounds of letters and packages throughout the course of the day. He examined appellant and reviewed the venous doppler study. Dr. Atassi diagnosed a DVT of the left upper extremity, which he opined, that was provoked from trauma to the site while she was working. He recommended ongoing anti-coagulation therapy for three months.

A report of left upper extremity venous doppler ultrasound dated October 17, 2019 revealed acute DVT in one of the left brachial veins and noncompressability of the left basilica vein, concerning for superficial thrombophlebitis.

In a January 16, 2020 letter, Dr. Manaparambil diagnosed DVT of the left upper extremity with associated pulmonary embolism. She opined that these conditions likely resulted from prolonged immobilization of the arm while appellant delivered mail at work.

On August 11, 2020 appellant, through counsel, requested reconsideration of OWCP's March 25, 2020 decision.

With the request, appellant submitted an additional narrative letter from Dr. Manaparambil dated July 27, 2020, which provided responses to various questions posed. Dr. Manaparambil again noted a diagnosis of DVT of the left upper extremity and that appellant may need long-term anti-coagulation therapy. When asked how this condition may have been affected by appellant's federal work duties, she opined that prolonged immobilization of the left upper arm while working was a provocative factor for developing DVT. Dr. Manaparambil further noted that appellant's symptoms are relieved any time she stops prolonged immobilization, and therefore, she would benefit from a job that does not involve holding the arm in one position for a prolonged period of time.

By decision dated November 4, 2020, OWCP denied modification of its March 25, 2020 decision.

Appellant timely appealed the November 4, 2020 decision to the Board. By decision dated March 21, 2023, the Board affirmed OWCP's November 4, 2020 decision.⁴

On July 28, 2023 appellant, through counsel, again requested reconsideration and submitted additional evidence.

In a December 14, 2022 narrative report, Dr. Manaparambil recommended that appellant avoid prolonged immobilization of joints, including mail delivery. She indicated that "prolonged immobilization of left upper arm holding it in the same position required for [appellant's] employment is a provoking [sic] factor for developing [DVT]."

In a subsequent report dated May 8, 2023, Dr. Manaparambil diagnosed recurrent DVT. She noted that, each time appellant returned to work without restrictions, she experienced a recurrence of DVT due to prolonged immobilization of the left arm while holding mail. Dr. Manaparambil explained that she did not experience DVT in any other part of her body.

OWCP also received an undated statement by an unknown author, which noted that appellant's symptoms correlated with her work duties.

By decision dated October 23, 2023, OWCP denied modification of its November 4, 2020 decision.

LEGAL PRECEDENT

An employee seeking benefits under FECA⁵ has the burden of proof to establish the essential elements of his or her claim, including that the individual is an employee of the United States within the meaning of FECA, that the claim was timely filed within the applicable time limitation of FECA,⁶ that an injury was sustained in the performance of duty as alleged, and that

⁴ *Id.*

⁵ *Supra* note 2.

⁶ *F.H.*, Docket No.18-0869 (issued January 29, 2020); *J.P.*, Docket No. 19-0129 (issued April 26, 2019); *Joe D. Cameron*, 41 ECAB 153 (1989).

any disability or medical condition for which compensation is claimed is causally related to the employment injury.⁷ These are the essential elements of each and every compensation claim, regardless of whether the claim is predicated upon a traumatic injury or an occupational disease.⁸

To establish that an injury was sustained in the performance of duty in an occupational disease claim, a claimant must submit: (1) a factual statement identifying employment factors alleged to have caused or contributed to the presence or occurrence of the disease or condition; (2) medical evidence establishing the presence or existence of the disease or condition for which compensation is claimed; and (3) medical evidence establishing that the diagnosed condition is causally related to the identified employment factors.⁹

Causal relationship is a medical question that requires rationalized medical opinion evidence to resolve the issue.¹⁰ The opinion of the physician must be based upon a complete factual and medical background, must be one of reasonable medical certainty, and must be supported by medical rationale explaining the nature of the relationship between the diagnosed condition and the specific employment incident.¹¹

ANALYSIS

The Board finds that appellant has not met her burden of proof to establish a left upper extremity condition causally related to the accepted factors of her federal employment.

Preliminarily, the Board notes that it is unnecessary to consider the evidence appellant submitted prior to the issuance of the November 4, 2020 decision because the Board considered that evidence in its March 21, 2023 decision. Findings made in prior Board decisions are *res judicata* absent any further review by OWCP under section 8128 of FECA.¹²

In her December 14, 2022 narrative report, Dr. Manaparambil diagnosed DVT of the left upper extremity. She opined that appellant's condition resulted from her federal work duties and indicated that prolonged immobilization of the left upper arm while delivering mail is a provocative factor for developing DVT. In her May 8, 2023 narrative report, Dr. Manaparambil diagnosed DVT and noted that the condition recurred each time that she turned to unrestricted work. She further noted that appellant was not diagnosed with DVT in any other part of her body.

⁷ *L.C.*, Docket No. 19-1301 (issued January 29, 2020); *J.H.*, Docket No. 18-1637 (issued January 29, 2020); *James E. Chadden, Sr.*, 40 ECAB 312 (1988).

⁸ *P.A.*, Docket No. 18-0559 (issued January 29, 2020); *K.M.*, Docket No. 15-1660 (issued September 16, 2016); *Delores C. Ellyett*, 41 ECAB 992 (1990).

⁹ *T.W.*, Docket No. 20-0767 (issued January 13, 2021); *L.D.*, Docket No. 19-1301 (issued January 29, 2020); *S.C.*, Docket No. 18-1242 (issued March 13, 2019).

¹⁰ *I.J.*, Docket No. 19-1343 (issued February 26, 2020); *T.H.*, 59 ECAB 388 (2008); *Robert G. Morris*, 48 ECAB 238 (1996).

¹¹ *D.C.*, Docket No. 19-1093 (issued June 25, 2020); *see L.B.*, Docket No. 18-0533 (issued August 27, 2018).

¹² *G.W.*, Docket No. 22-0301 (issued July 25, 2022); *M.D.*, Docket No. 19-0510 (issued August 6, 2019); *Clinton E. Anthony, Jr.*, 49 ECAB 476, 479 (1988).

The Board finds that Dr. Manaparambil's statements that the DVT condition was work related are conclusory. Dr. Manaparambil did not provide medical rationale explaining how the accepted work duties caused the diagnosed DVT condition. Without explaining physiologically how the specific movements involved in appellant's job caused, contributed to, or aggravated the specific diagnosed conditions. Dr. Manaparambil's opinions as set forth in the December 14, 2022 and May 8, 2023 reports are of limited probative value and insufficient to establish the claim.¹³

OWCP also received an undated statement by an unknown author regarding appellant's DVT symptoms. Reports that are unsigned or that bear illegible signatures cannot be considered probative medical evidence because they lack proper identification¹⁴ as the author cannot be identified as a physician.¹⁵

As appellant has not submitted rationalized medical evidence sufficient to establish a left upper extremity condition causally related to the accepted factors of her federal employment, the Board finds that she has not met her burden of proof.¹⁶

Appellant may submit new evidence or argument with a written request for reconsideration to OWCP within one year of this merit decision, pursuant to 5 U.S.C. § 8128(a) and 20 C.F.R. §§ 10.605 through 10.607.

CONCLUSION

The Board finds that appellant has not met her burden of proof to establish a left upper extremity condition causally related to the accepted factors of her federal employment.
