“But I also know that this woman actually has control over what ultimately is a life or death decision with the stroke of her pen. And clearly she is in a bad mood... What I have is a very expensive medical condition and no way to pay for it... it is that simple. I need help. **We as women living with HIV are driven into poverty and held there, and we are drowning.**”

Can I Reach for the American Dream?

Posted on April 20, 2012 by pwnusa

Can I Reach for the American Dream?

by Sonia Rastogi

April 17th, 2012 was Tax Day as well as Equal Pay Day (read Teresa Sullivan's Wage Gap blog), a day established to bring attention to the pay gap for women in the U.S. For many women living with HIV, Tax Day brings home the truth that regardless of a woman's financial status, an HIV diagnosis is frequently a sentence to a lifetime of poverty.

HIV CRIMINALIZATION

Are You At Risk?

when
sex is a
crime
& spit a
dangerous
weapon:

Laws and policies criminalizing HIV exposure and mandating disclosure may increase potential for coercion and abuse, and can make it harder for WLHIV to leave violent, unhealthy or abusive relationships

VIOLENCE

“I dated a guy who knew my HIV status, but when his family found out, he acted like he didn't know and pressed charges [on] me. I almost lost everything. It has taken me a long time to disclose to anyone since.”

“I have felt ashamed of my body and worthless. My ex would tell me that nobody else would ever want me, because of my HIV”

“My partner didn't want anyone else to know about my HIV status. He didn't even allow me to see my HIV doctor, because he was afraid of people finding out. So I basically had no support and was not getting care.”

I was in an abusive relationship for 4 years. When I attempted to leave, he threatened to come after me under HIV criminalization laws because I didn't disclose to him when we first got involved. He also threatened to have my kids taken

WLHIV face internalized stigma

“There is a big black X from head to toe. I am diseased and unworthy of feeling good about my body again.”

“I feel dirty and ashamed.”

“It caused me to loose [sic] all hope as a woman where I felt ugly and that I had to settle for whatever man wanted to date me.”

“I have had a guy tell me that I should have told him before kissing him that I was positive. He was convinced HIV is transmitted through saliva. **He even threw in that he could prosecute me for murder.** Apparently there is grave misunderstanding about disclosure laws amongst the general public.”

... these and other factors (*housing instability, economic insecurity*) may complicate leaving an abusive relationship

... which is often not addressed by healthcare providers

In a survey conducted in 2013 and repeated in 2015, **nearly half of women living with HIV** had never been told by a provider that viral suppression was an effective HIV prevention strategy.

Motherhood & partnership

- Increasingly “parenthood”
- For many WLHIV, motherhood may be the only socially valued identity available to them (Barnes, et al 2009)
- Critical for providers to understand motivation, including cultural factors related to conception, sexuality, and relationships for PLHIV

Community violence disproportionately impacts transgender women of color

- Almost three-quarters of LGBTQ homicide victims in 2013 were transgender women. 67% were transgender women of color
- Transgender women were 6 times more likely to experience physical violence when interacting with the police than other LGBTQ survivors of violence
- Transgender people of color were 1.8 times more likely to experience violence in shelters than other LGBTQ survivors of violence

- *National Coalition of Anti-Violence Programs (NCAVP) Annual Report, 2014*

Rates of trauma and PTSD in WLHIV are much higher than the general population

Meta-analysis of all studies among US WLHIV

Categories	Number of Studies	Pooled <i>n</i>	Prevalence (%)	95% Confidence Interval	Reference Prevalence
Intimate Partner Violence	8	2285	55.3	36.1 - 73.8	24.8
Childhood Sexual Abuse	7	3013	39.3	33.9 - 44.8	16.2
Childhood Physical Abuse	6	1582	42.7	31.5 - 54.4	22.9
Childhood Abuse Unspecified	2	232	58.2	36.0 - 78.8	31.9
Lifetime Sexual Abuse	8	1182	61.1	47.7 - 73.8	12.0
Lifetime Abuse Unspecified	6	1065	71.6	61.0 - 81.1	39.0
Recent PTSD	6	499	30.0	18.8 - 42.7	5.2

29 studies met our inclusion criteria, resulting in a sample of 5,930 individuals.

Table 2 Heath-related Characteristics

Description	Sample size	Number (percent) of participants with each characteristic
Mental health	111	
Depression		53 (47.7%)
Bipolar		8 (7.2%)
Anxiety		9 (8.1%)
Schizophrenia/psychosis		3 (2.7%)
Other		4 (3.6%)
Low self efficacy	109	18 (16.5%)
Trauma		
Abused, threatened, and/or victim of violence in the past 30 days	110	19 (17.3%)
Abused, threatened, and/or victim of violence in lifetime	110	79 (71.8%)
Coerced to have sex in the past 30 days	110	9 (8.2%)
Coerced to have sex in lifetime	110	71 (64.5%)
Median CD4 count (cells/μl) at survey	93	387 (range 0 – 1363)
Viral load (copies/ml) at survey	90	
<75		33 (36.7%)
75-9,999		30 (33.3%)
10,000+		27 (30.0%)
Antiretroviral therapy		
On ART*	112	63 (56.2%)
On ART and detectable viral load	90	17 (18.9%)
Self-reported adherence < 90% by VAS**	63	15 (23.8%)

*ART = highly active antiretroviral therapy; **VAS = visual analog scale

WHP establishes a formal partnership with Positive Women's Network-USA (PWN-USA), the largest membership and advocacy group of HIV-positive women in the United States

WHP and Positive Women's Network-USA (PWN-USA) have established a formal partnership to realize a new model of trauma informed primary care for US women living with HIV.

This partnership is exciting for many reasons because

PWN-USA has wide ranging influence, insight and credibility that will ensure that the new model of primary care is truly patient-centered and successful. PWN-USA is among the most effective advocacy organizations in the country. Its work is truly inspired, effective, and grounded in the inherent wisdom of its members.

Presidential Memorandum -- Establishing a Working Group on the Intersection of HIV/AIDS, Violence Against Women and Girls, and Gender-related Health Disparities

MEMORANDUM FOR THE HEADS OF EXECUTIVE DEPARTMENTS AND AGENCIES

SUBJECT: Establishing a Working Group on the Intersection of HIV/AIDS, Violence Against Women and Girls, and Gender-related Health Disparities

Federal Interagency Workgroup: Next Steps (Oct 2014)

- Increased screening for both HIV and IPV in primary care clinics
- Scale up effective interventions to help HIV-negative and HIV-positive women who have experienced violence
- Expand outreach and prevention in communities with high rates of HIV, including economic empowerment

Trauma-Informed Care from a Social Justice Perspective

"Social ideals of equality cannot be pursued in relations that promote inequality. The way we do things is not just a means to an end, but an end in itself."

Prilleltensky, I., & Nelson, G. (2002). *Doing psychology critically: Making a difference in diverse settings*. New York: Palgrave Macmillan. (p. 29).

Positive Women's Network Releases New Model for Trauma Awareness

Tuesday May 26, 2015

[PRINT](#) [EMAIL](#) [COMMENTS \(0\)](#)[T](#) [T](#) [T](#)

Positive Women's Network - USA, a national membership body of women with HIV, is proud to announce the release of a new model for bringing trauma awareness and healing into primary healthcare settings.

The conceptual framework, developed in partnership with University of California - San Francisco (UCSF) clinician-researchers, provides a practical guide to help providers incorporate trauma-informed care into clinical practice.

"Trauma-informed care is the missing ingredient to engage women with HIV in care successfully and to ensure good health

outcomes," said Naina Khanna, Executive Director of PWN-USA, who co-authored the paper presenting the new model.
