NNWJ) National Nuclear Workers for Justice and (PRESS)PortsmouthPiketon Residents for Environmental Safety and Security.

Fire fighters and Security guards and etc know matter of the job classifications when they enter into the gaseous diffusion buildings they are being exposed to more then just fires. When workers enter the buildings no matter the job classifications they are widely exposed to many air borne pollution. We need to look at the wide range of exposure to almost everything on site. At Piketon workers that entered into the process building were exposed to the PCB oil that was dripping from the overhead piping to the floors.. this oil at Piketon was radioactive oil. We worked around it everyday. We have company documentation if you ask for it.

Thank You
Vina Colley
