Subject: Asbestos exposure employees
Date: Thursday, November 15, 2018 11:42:14 AM

Should include the workers that used the furnace in the processing of the product, the workers that processed the neutron tube since the vermiculite (asbestos) was used to create a vase for the mercury to go into and for the mercury to be heated up as well as used for mercury spills; the workers that continued the product/processes while the construction workers were adding on to the building.
